<https://github.com/data-marty/DataGovernance>

- Senior Data Consultant

- SQL Server (20+ years)
- Microsoft Azure (~8 years)
- Microsoft Fabric (~2 years)

Introduction

Setting you up for success!

Hopefully 😊

Data Governance

What's it all about?

Data & Governance

Presentation Aims

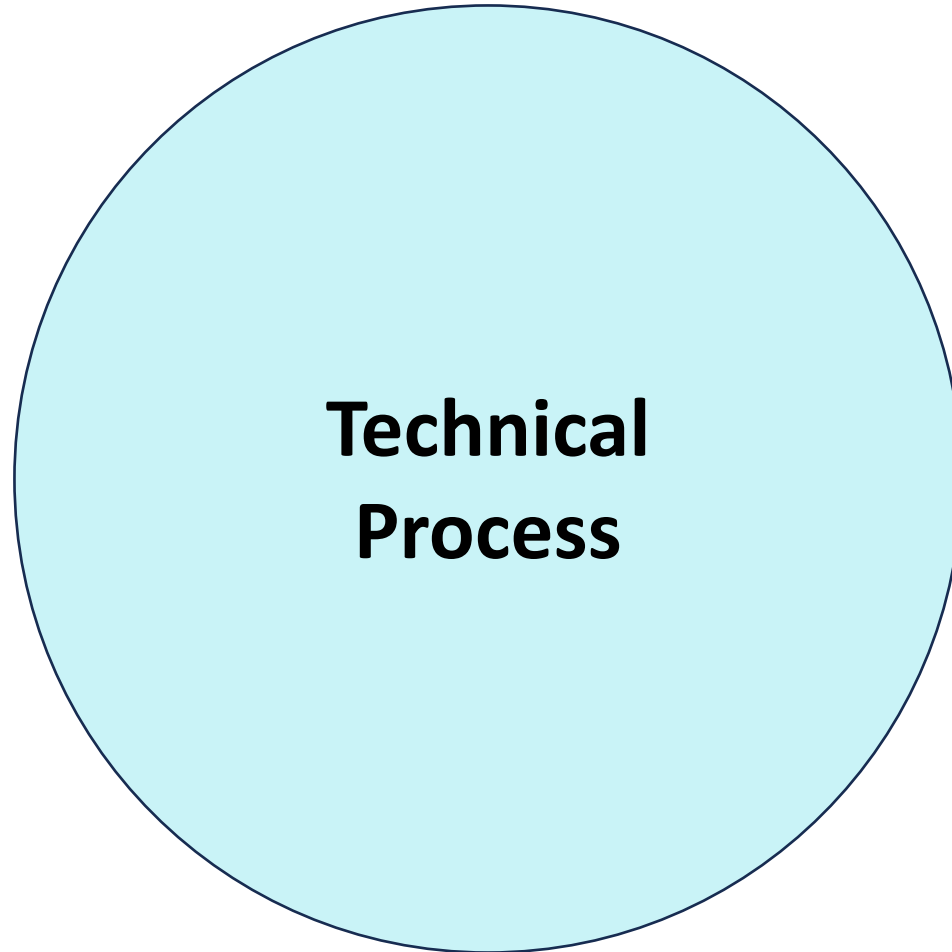

- Provide a framework for your ongoing research
- What might be involved in “setting up Data Governance”
- Note:- Tech* is only part of the jigsaw

*Microsoft products used as examples

Agenda

- A High-Level look at Data Governance
- An excellent resource for ongoing learning and collaboration
- The Business World
- The Technical World
- Summary

One Side of Data Governance

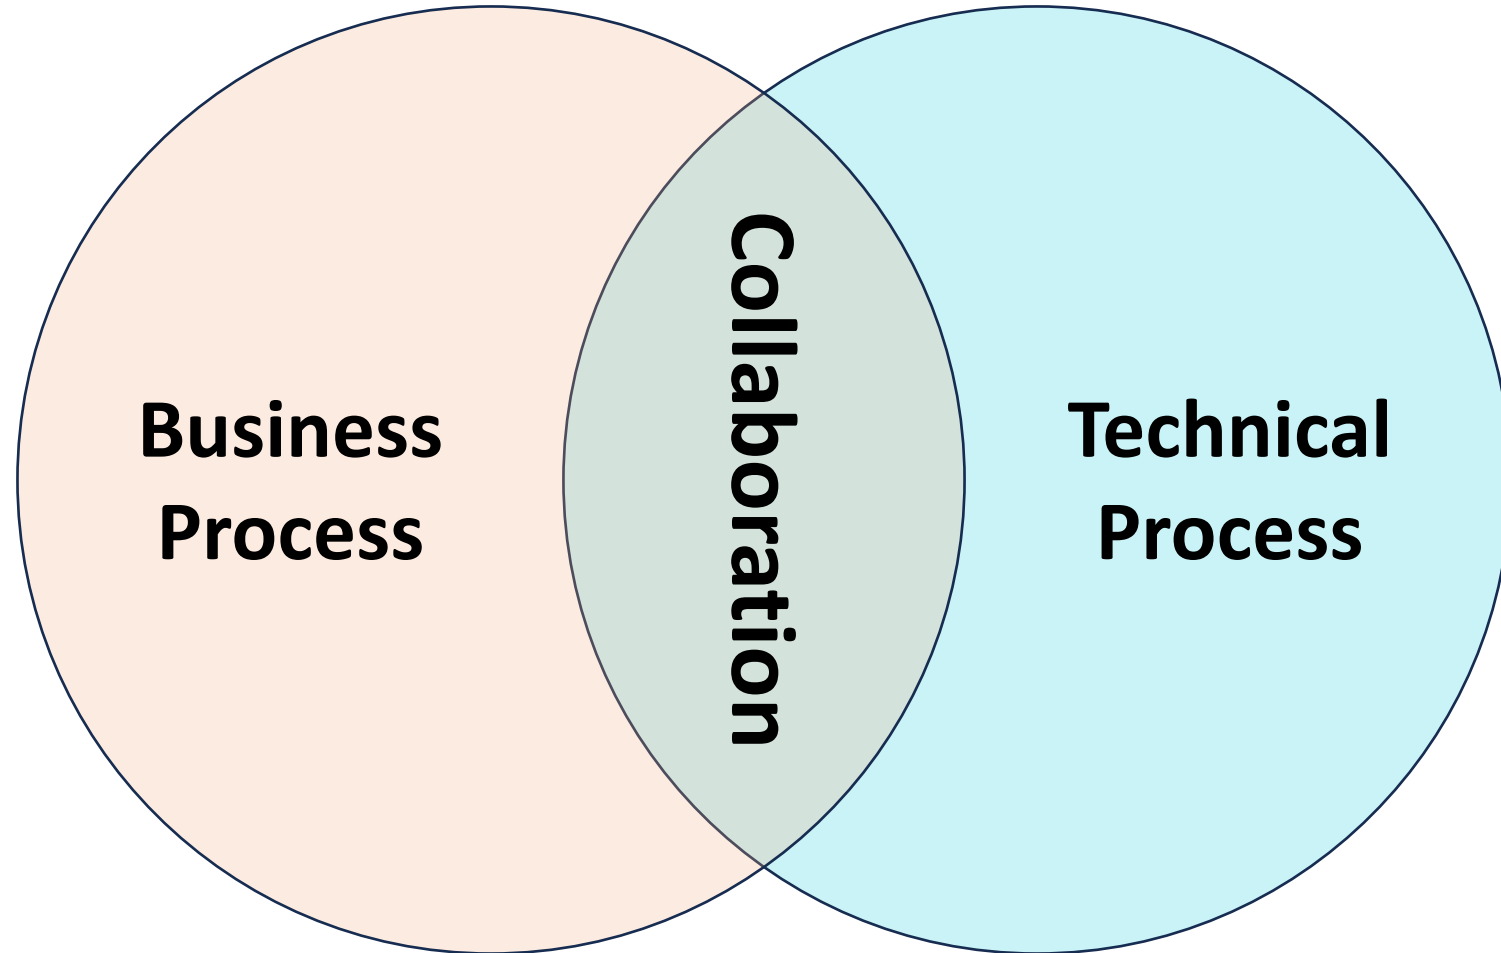

Another Side of Data Governance

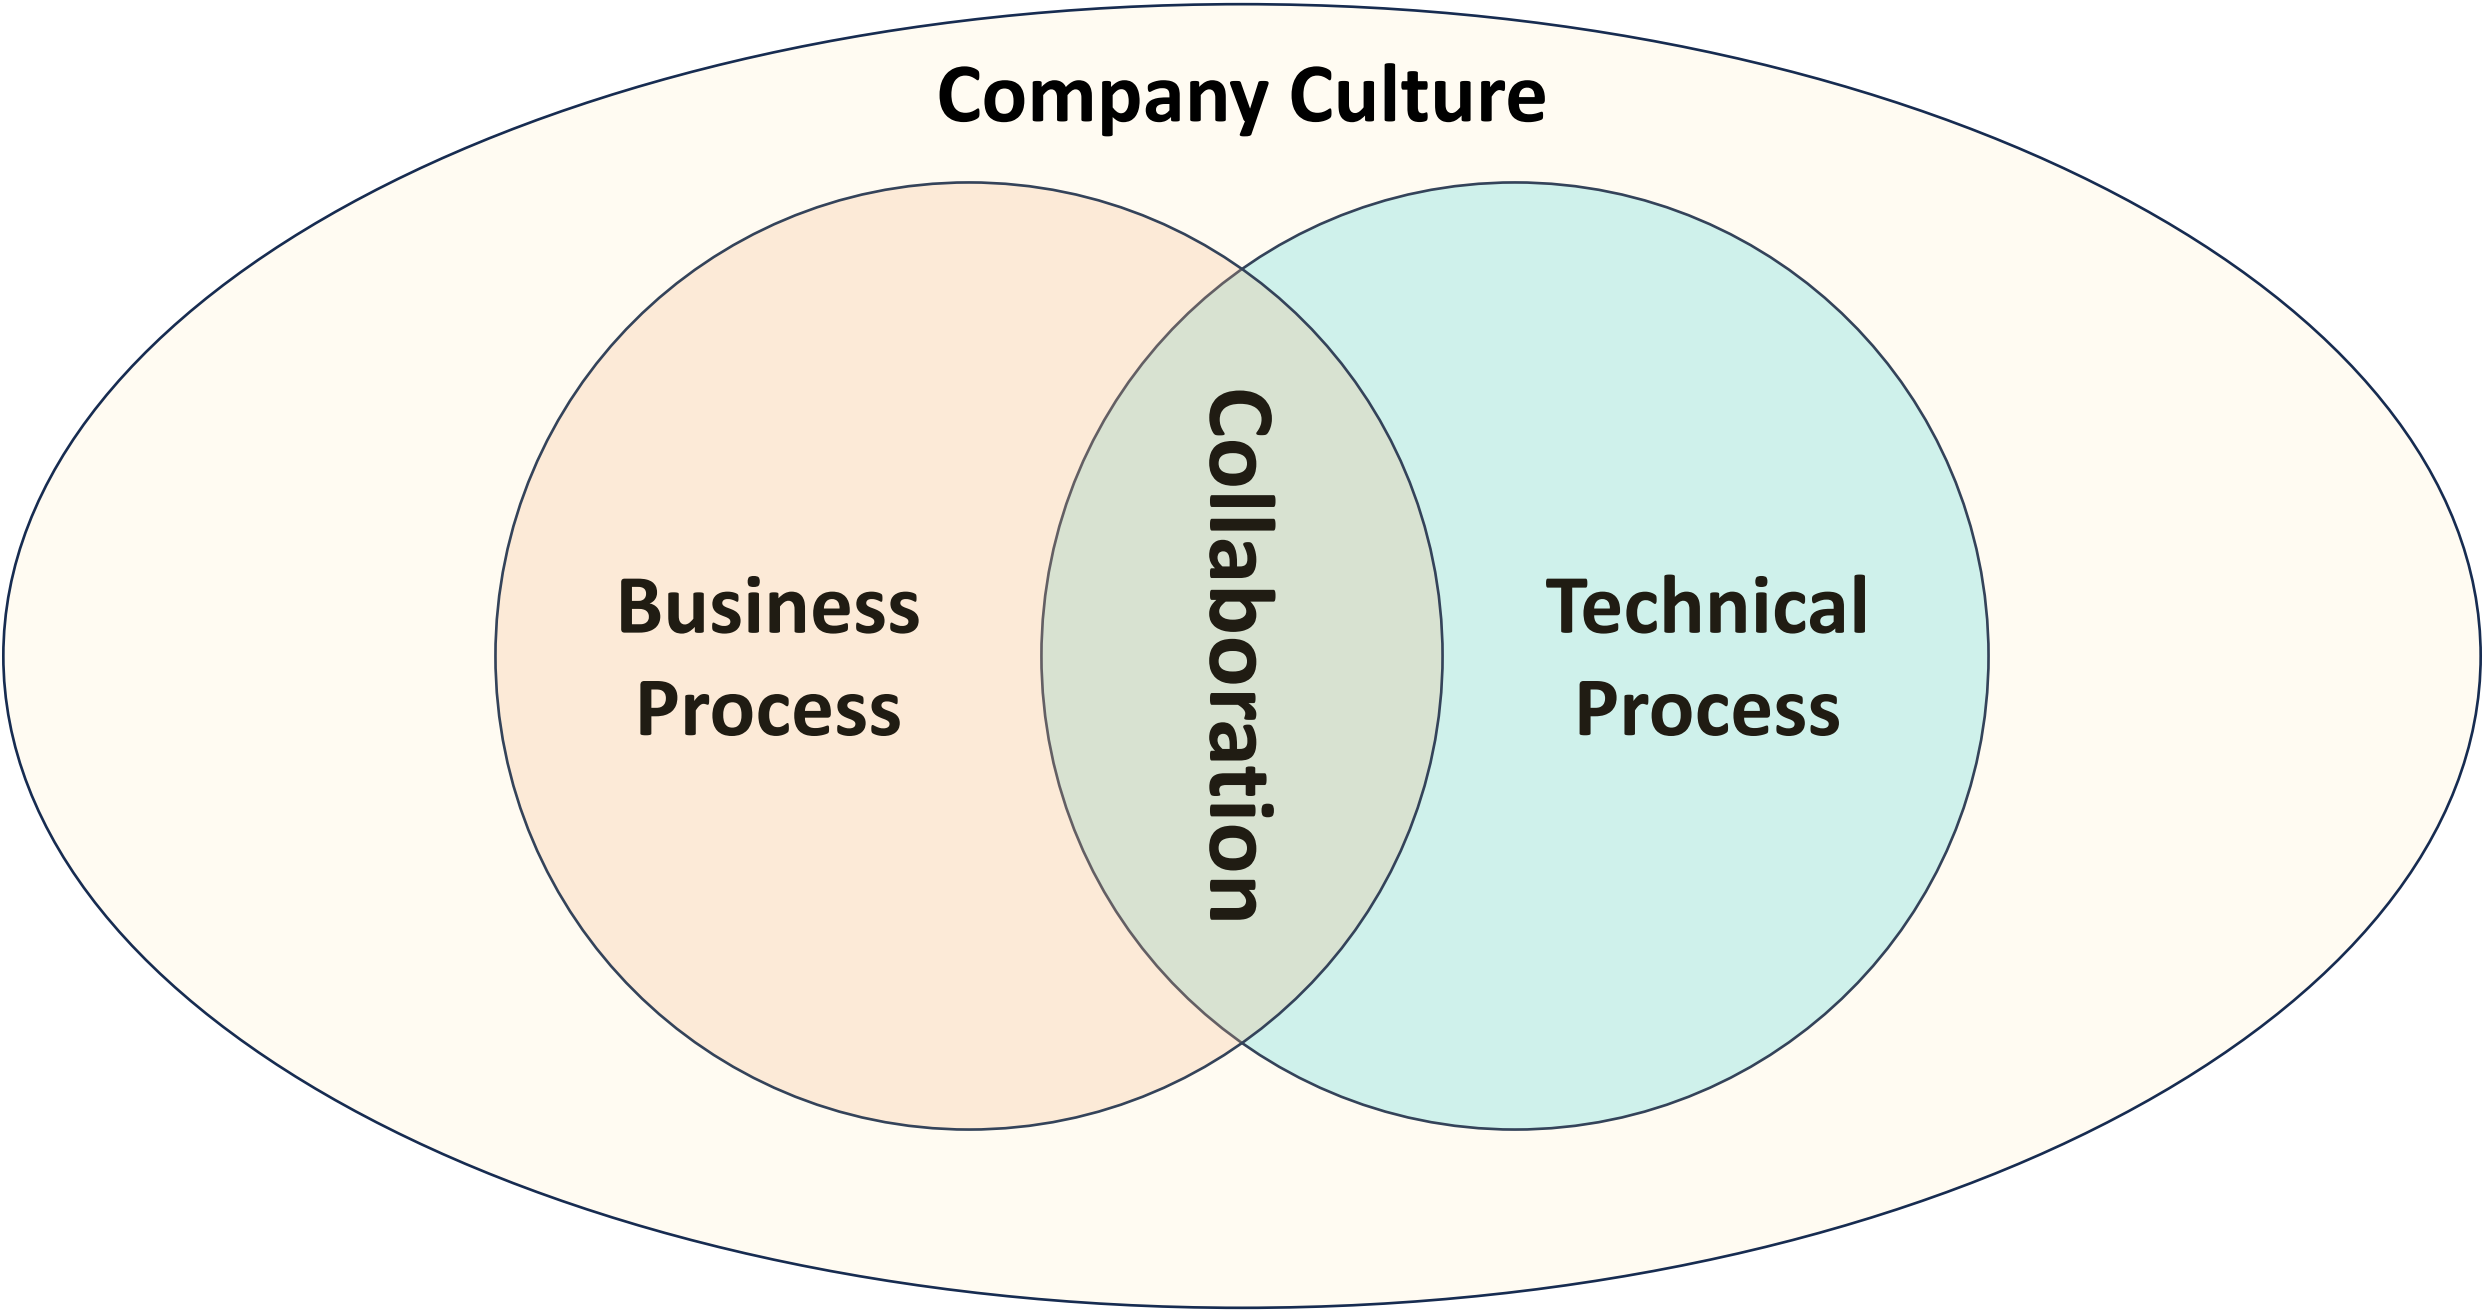

Both existing together

Collaboration is a key ingredient

Company Culture

**Business
Process**

Collaboration

**Technical
Process**

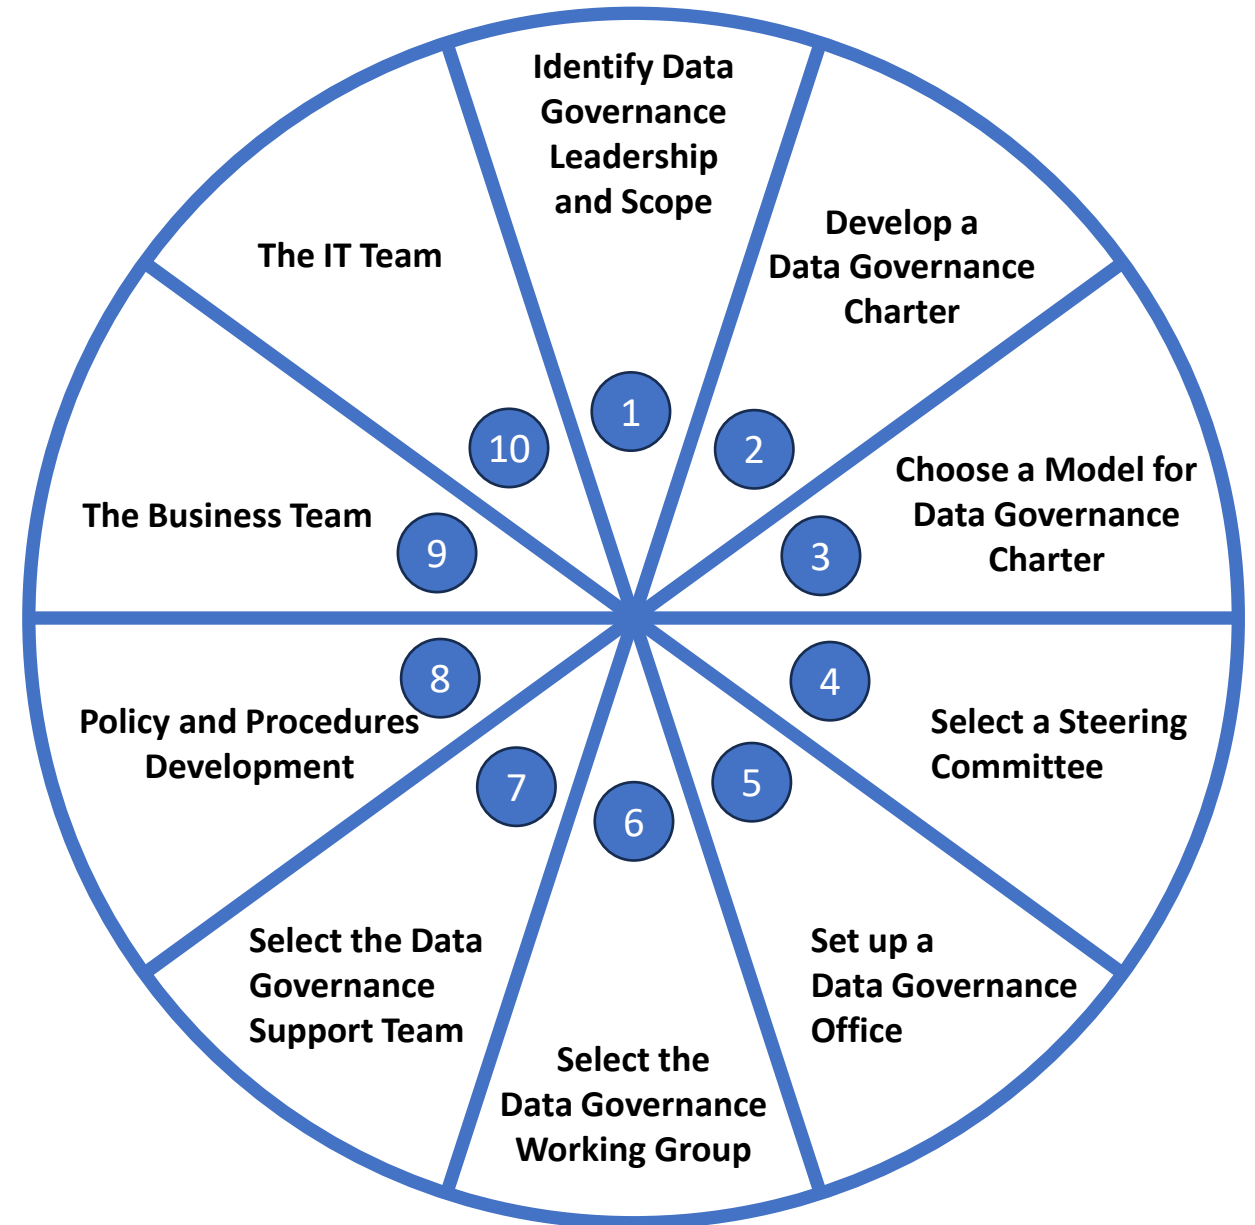

A Path to Guide You!

And make you stronger!

Hopefully 😊

Collaboration is a key ingredient

- 1 Identify Data Governance Leadership and Scope
- 2 Develop a Data Governance Charter
- 3 Choose a Model for Data Governance Charter
- 4 Select a Steering Committee
- 5 Set up a Data Governance Office
- 6 Select the Data Governance Working Group
- 7 Select the Data Governance Support Team
- 8 Policy and Procedures Development
- 9 The Business Team
- 10 The IT Team

The Business

Are they're relying on data?

Hopefully 😊

Business World

Company Performance

Business
Outcomes

Decision Quality

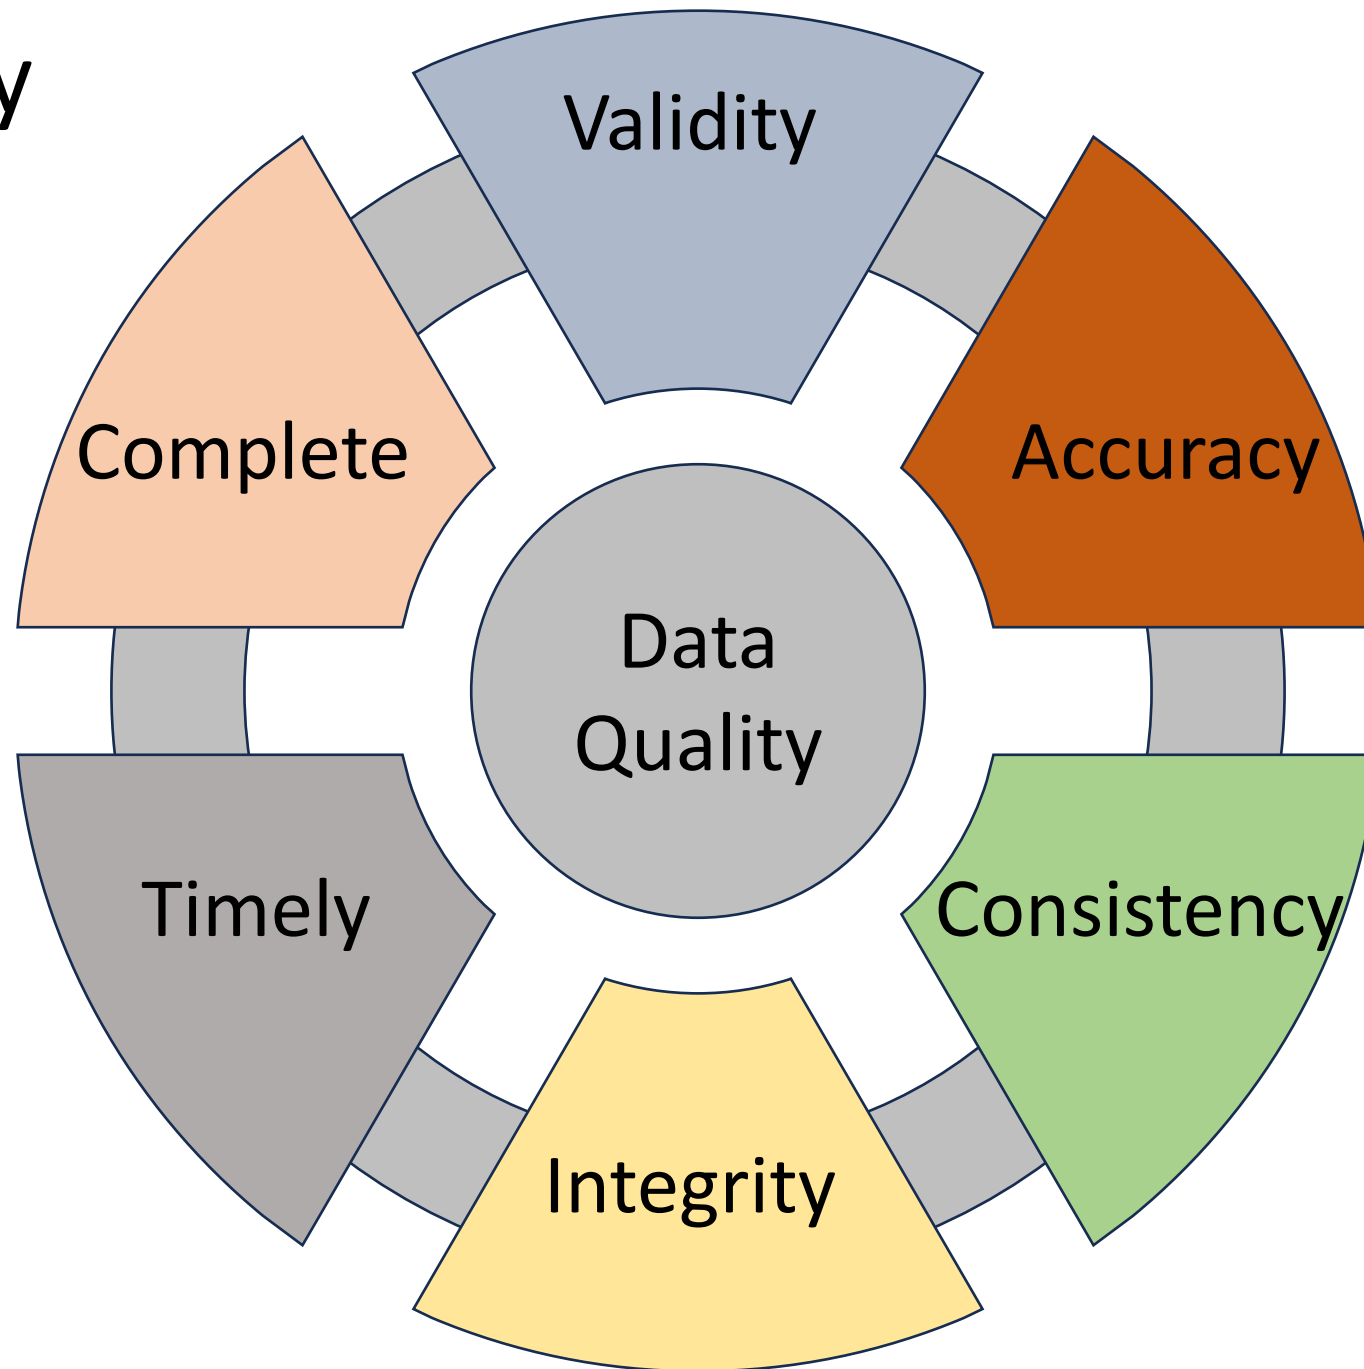

Information Quality

Data Quality

Internal
Processes

External
Processes

Data Quality

Ingredients

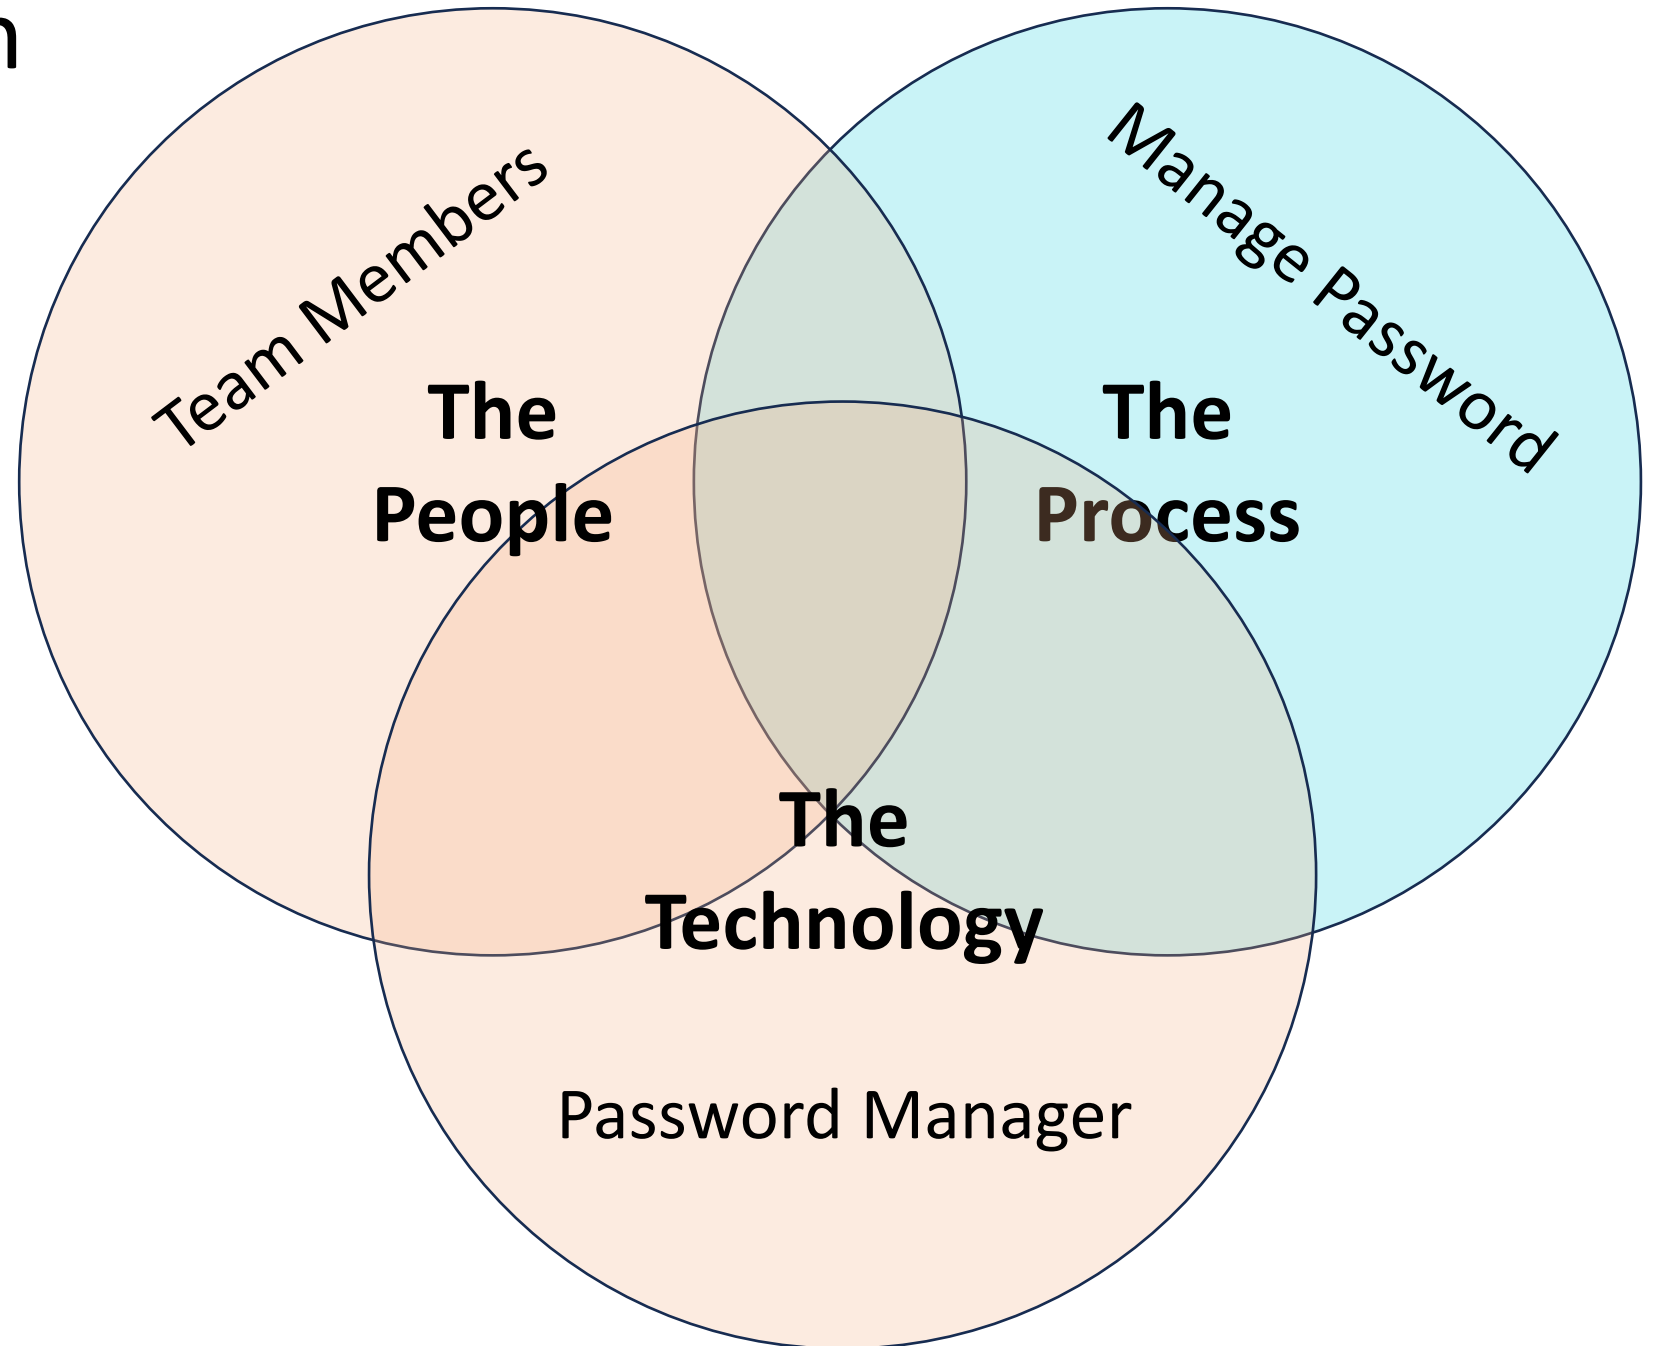

The Tech

Tech will only get you so far

The Collaboration

- People
- Process
- Technology

A Personal Story

- How many online accounts do you have?
- How many of those account credentials are committed to memory?
- How often do you hit 'forgot my password?'
- Get yourself a good Password Manager.
- Get yourself (and your family) a good strong process.

Tooling Types

- Manage Data Governance
- Manage Master Data
- Data Quality
- Data Obfuscation
- Tooling built into your product

Some Examples coming up! – but first roles

Data Governance Roles

- **Data Quality Management**
- **Data Governance Implementation**
- **Data Catalog Management – (or is it Catalogue? ☹)**
- **Metadata Management**
- **Data Stewardship and Collaboration**
- **Data Custodian (Business and Technical)**
- **Compliance and Risk Management**
- **Training and Education**
- **Reporting and Documentation**

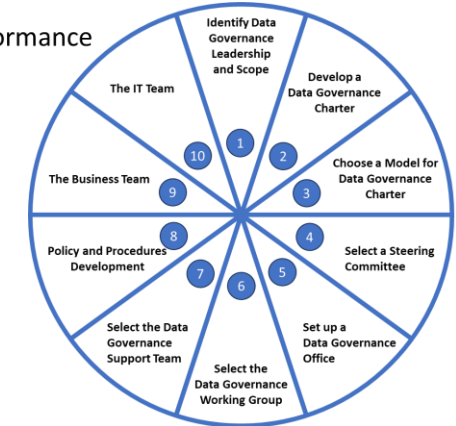

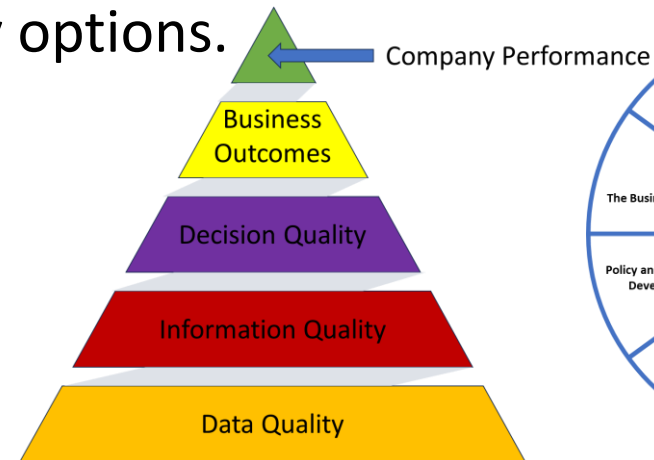

Tooling

- Microsoft Purview
- Profesee
- Data Quality Services (SQL Server)
- Redgate Data Masker
- Dynamic Data Masking, Row Level Security, Tagging

Demo

Summary

- It's about data – but it's also about people and process.
- Yes, it has a technical side – there are many options.
- Improve your personal governance.
- Know your 'big ticket items'
 - Security
 - Compliance
- Build your resources and your networks
